Modular Boiler Submittal Data

LZDF SERIES—Dual Fuel/Steam

A Caravan modular boiler system consists of two or more compact boilers that offer significant advantages in terms of installed cost, efficiency and reliability. Caravan systems are based on step-firing just enough modules to meet heating demands. LZDF systems are available in 620,000 to multi-million Btuh gross input. For additional information, see Caravan Engineering Manual, pub. C-30.

Standard Equipment

One per module unless otherwise noted

Pre-assembled heat exchanger with insulated jacket.

Dual fuel gas/oil burner with oil valve, gas regulator, gas valve, flame safeguard with UV scanner and on-off fuel transfer switch (unmounted). Gordon-Piatt burner model #S4.1-GO has intermittent gas pilot to light oil and/or gas main flame.

Module pressure gauge and siphon (unmounted).

System pressure gauge and siphon (unmounted, one per system).

Module pressure relief valve, ASME (unmounted) 15 psi.
Double swing draft regulator (unmounted).
Flue brush.
Drain cock (unmounted).
Water level sight glass (unmounted).

Standard Equipment

Dual fuel changeover thermostat.
Internal tankless heaters.
Two-stage fuel pump in place of one-stage fuel pump.
ASME Package—includes:
67 Low water cutoff (one per module)
PA404A Pressure control (one per mod.)
67M Low water cutoff (one per system)
L4079B Manual reset pressure

Ratings

Dual Fuel Caravan ratings and dimensions/steam models—LZDF Series

* Light oil, 140,000 Btu per gallon.

† Net ratings are based on piping and pick-up allowance of 1.33. Slant/Fin should be consulted before selecting a boiler for installation having unusual piping and/or pick-up requirements. For higher elevations, input may need to be reduced.

‡ Based on 150 Btuh per square foot E.D.R. at 170°F average water temperature.

§ Modules in excess of 8 are piped in parallel in two or more banks.
